Electrical tape

Product group	505
Max temperature (°C)	80
Min temperature (°C)	-10

Hydroscand's s-labeled electric tape has good adhesion, also to low surfaces energy materials. The adhesive is non-corrosive to metals, and has good resistance to water, weak acids and alkalis, oils, most solvents and UV light. It is also flame retardant and can be used in electrical applications for insulation, cable wrapping and harnessing. Works well in autoelectric contexts as well as for buried cables.
